T-Soft announces the formation of T-*fix* Services

New division designed to help organizations get IT projects back on track

West Newton, PA – November 7, 2005 – T-Soft, Inc. today announces the formation of a new division specializing in helping organizations with technology initiatives underway that are not going as planned. T-*fix* will evaluate an organization's IT project and come back with a series of recommendations designed to energize the project to get it back on track.

T-Soft's experience in helping companies with a broad range of technology initiatives makes the formation of the division a natural progression. Examples of past projects include the development of eCommerce web sites, web enabling legacy applications, development of a Quality Management System evolving around inspection scheduling and management, a privacy management system, a HIPPA compliant claims processing and inquiry system for an insurance benefits services company, a portable sales office system with synchronization for remote sales offices. Customers include CompUSA, Easton Sports, Actebis SA, Göbel & Partners, EBDS & Benefit Partners.

"We're excited about the formation of our T-*fix* division", says Frank Greenawalt, President of T-Soft. "Our track record of successful project implementations will enable us to help companies get their IT projects back on track. Our staff averages over 15 years of experience beginning as specialists in distribution and logistics and evolving into today's projects that cover the gamete in information technology."

According to Nat McBride, Project Manager for Göbel & Partner, "T-Soft is able to roll with the ups and downs of a project implementation. When an unforeseen circumstance arises, they have an amazing ability to adapt with willingness and flexibility! Our business is a demanding one. We would not have been able to find anyone else to meet our demands. T-Soft did so with grace and humor through the entire process. This helped keep the project moving forward!"

Service options range from

- Analysis of project plan and status with recommendations
- Placement of project managers and staff on the project
- Training of staff on proper use of the system
- Rewriting of code to improve efficiencies
- Custom code development to add additional functionality
